# Real security and a wide application range

You can make use of the JABLOTRON 100 alarm on small as well as large premises. Besides security it will also take care of smart functions, from switching on the lights to opening the garage. The entire security system can also be controlled remotely via the MyJABLOTRON application.

ALARM FOR YOUR  
FLAT

ALARM FOR YOUR  
HOUSE

ALARM FOR YOUR  
COMPANY

## Four steps to security

- 1** At the beginning, there is a high-quality alarm device. We have 25 years of experience with its development and production and we pride ourselves on its innovative features, high quality and easy operation.
- 2** It is followed by professional installation by certified partners who are regularly trained. This gives you the guarantee that everything will work properly.
- 3** Another suitable step is the connection of your home alarm to an Alarm Receiving Centre.
- 4** Its operators evaluate reports from your alarm and if necessary they will contact you and send a security squad to your guarded apartment, house or company.

# 1990

We have been developing and producing high-quality security systems for more than 25 years.

# 100 000

This is the number of users that control our alarms via the MyJABLOTRON application worldwide.

# 32

 devices

You can have so many devices in your home or garden under control thanks to the JABLOTRON 100.

# Intuitive two-button operation

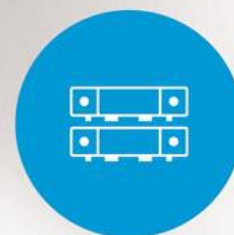

The JABLOTRON 100 security system is so easy to control that you will manage it with your weekend shopping still in one hand. All you need to do is to press the button of the respective segment. Each of them represents one part of the house or function, such as e.g. switching on the lights. If you e.g. add a garage later, you can expand the JABLOTRON 100 alarm, no problem. You just need to install new detectors and add another “traffic light” segment to the keypad. There can be up to 20 of them. In addition, the possibility to combine wireless and bus devices in the system enables tidy installation of the system, which is also friendly to your wallet.

# Protect your property from anywhere with MyJABLOTRON

You can easily set and unset your alarm or control your devices remotely via the MyJABLOTRON mobile and web application. You can check what is happening in your home or company from anywhere. On holiday or standing in a queue in a supermarket.

## Easy to use

The application is controlled as easily as our alarms – the “traffic lights” readily inform you of what is currently active. You can open your garage or start irrigation of your garden while on holiday literally with one touch.

## Current information

View a photo right on the spot and make sure everything is alright. The application allows you to check the electricity consumption, history of events or the position of your car as well.

## Event notifications

PUSH notifications, e-mails or SMSes immediately inform you about every alarm, but also a temperature drop or low batteries.

## Setting access rights for sharing

You can set detailed access rights for users for a specific activity or a certain section, consisting of various parts of your house or company.

Download free

For secure and unlimited data transfer between the MyJABLOTRON application and your JABLOTRON 100 alarm, use our Security Data Connector™ service.

# Comfortable living with the JABLOTRON 100 alarm

The Jablotron alarm also offers smart functions that will make your life in your home as well as in your firm much easier. You can switch appliances on and off remotely, raise car park barriers by flashing the car lights or activate the automatic switching-on of lights after unsetting or entering a certain room.

FLASHING

# We will also protect you from fire, water and gas

The JABLOTRON 100 security system will not only warn you of imminent danger in the form of natural elements, but also of an excessive temperature in a room or too high electricity consumption.

## Smoke detector

The sensor detects smoke or an elevated room temperature and warns you before the fire actually breaks out. It will start an acoustic signal, send a message to your mobile phone and it can inform an ARC.

## Gas detector

It can recognize a gas leak in a timely manner and warn you before your health is in danger. It will activate an alarm, send a message to your mobile phone and it can inform an ARC.

## Flood detector

The detector detects water leaks and warns you before you incur any damage. It will activate an alarm, send a message to your mobile phone and it can inform an ARC.
